LEBER IS

Leber is the largest manufacturer of children's playground equipment in Russia.

For 14 years, we have set the standards for quality and safety in urban development.

We were the first company in Russia to export playground equipment to international markets.

Our playground complexes are already installed in the UAE, Saudi Arabia, Mongolia, Jordan, Kazakhstan, Uzbekistan, Armenia, and other countries.

We are proud to create safe and functional playgrounds that bring joy to children all around the world!

Leadership and Scale:

More than 10,000 of our playgrounds are spread across Russia, welcoming millions of children every day.

International Recognition:

We are proud to have won the prestigious 'Exporter of the Year' award.

Full Production Cycle:

Our company includes a production complex, warehouse facilities, construction and installation management, our own fleet, design and engineering departments, and a dedicated customer service team.

Quality and Safety:

Our products come with global quality and safety certifications. We offer a warranty of up to 15 years.

SUSTAINABILITY OF LEBER

FOREST CONSERVATION AND RESTORATION

We obtain our wood only from suppliers who possess a forestry certificate, ensuring their commitment to reforestation initiatives. Thanks to our support this year, trees have been planted in over 50 hectares across seven regions in Russia. We are committed to ensuring that 100% of the forest areas used for harvesting materials for our playgrounds will be restored.

LOW-CARBON RENEWABLE ENERGY

Low-carbon renewable energy is a key component of our manufacturing processes, leading to a 15% reduction in greenhouse gas emissions. These renewable sources provide a sustainable, long-term answer to our energy needs in production, without consuming natural resources. Leber is committed to lessening its carbon footprint by adopting eco-conscious energy sources.

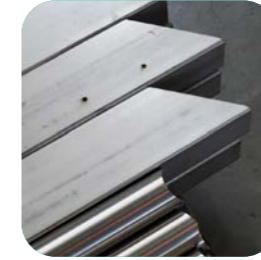

WASTE RECYCLING

At Leber, we specialize in metalworking and paper recycling. By processing metallic waste and scrap into new materials, we significantly lower natural resource consumption and energy costs. Recycling metal scrap minimizes waste that would otherwise occupy landfill space for centuries and cuts sulfur dioxide and carbon emissions, improving air quality. By recycling paper, we decrease the need for new trees, supporting a circular economy where materials are reused, and waste is repurposed into new resources.

RECYCLED PLASTIC

We incorporate granules from recycled plastic, mainly PET bottle caps, to minimize plastic waste. This approach reduces the need for natural resources and significantly lessens landfill waste, thus easing environmental strain. Additionally, this recycling process helps lower greenhouse gas emissions, enhancing the ecological balance.

RECYCLING METAL

In our production, we regularly incorporate recycled metal, which cuts down on the necessity for raw natural resources and minimizes waste. This recycling process consumes much less energy than producing metal from new sources, resulting in a decrease in non-renewable energy usage and lower greenhouse gas emissions. Additionally, metal recycling helps conserve natural resources like iron ore, coal, and limestone, which are used in primary metallurgy.

WASTE HEAT

We use production waste like sawdust, shavings, wood offcuts, and material residues as an efficient heat source. This method not only cuts energy costs but also reduces carbon emissions by burning these materials in controlled settings, thus preventing methane emissions from landfill decomposition. This practice strengthens our sustainability by reducing dependency on external energy sources.

EFFICIENT RESOURCE USE

We have installed automatic shutdown systems for machines during off-hours. This reduces energy consumption and alleviates the load on the energy infrastructure, leading to lower CO2 emissions. Additionally, these systems help extend the life of our equipment, reducing production waste and resource use.

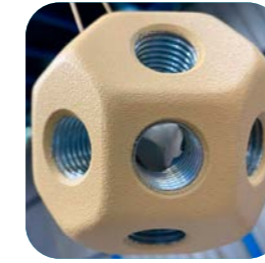

GREEN SOLUTIONS FOR ROPES

Each strand of our polyester ropes is wrapped in recycled material. This process makes the ropes highly durable and resistant to vandalism, while also increasing their environmental sustainability. The rope fasteners are crafted from recycled aluminum cans, reducing both energy consumption and waste.

TECHNOLOGIES

MARCHI NODE

In the production of connecting elements for our products, we employ the patented "Marhi Node" technology. This ensures a high level of joint strength, which is particularly important for structures subjected to intense loads.

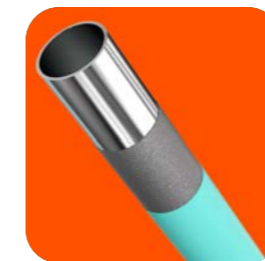

WELDING ROBOT

With the help of the robot, we developed a technology for creating a single continuous weld. This has significantly improved the quality of parts by enhancing the welding process, resulting in stronger and more reliable connections.

SHOT BLASTING

After welding, all metal surfaces are treated with abrasive shot blasting. High-speed abrasive particles clean the surface, effectively removing rust, scale, old coatings, and other contaminants. This process minimizes the risk of corrosion, improves the adhesion of polyester powder paint, and enhances the product's resistance to mechanical stress.

LEBER ZINC PROTECT (CORROSION PROTECTION)

Leber Zinc Protect significantly enhances the corrosion resistance of metal products, making them four times more resistant to rust. This process ensures the quality and longevity of Leber equipment, even in extremely humid climates.

TECHNOLOGIES

LEBER DURABLE PAINTING (SPECIAL POWDER COATING)

Using our Leber Durable Painting technology, we apply eco-friendly powder coatings that deliver durable, safe, and visually appealing finishes. Our powder compositions include polyester, epoxy, and hybrid systems. The paint is designed to withstand mechanical damage and environmental influences, significantly extending the lifespan of our products.

METAL PASSIVATION

We treat metals with a special chemical compound that significantly increases their resistance to corrosion. This is followed by grinding and polishing to achieve a "mirror finish" Passivation creates a thin protective layer on the metal surface, preventing contact with aggressive environments, such as moisture.

ADDITIONAL PACKAGING FOR LONG-DISTANCE SHIPPING

We offer additional packaging services for equipment that needs to be transported over long distances. We select the type of packaging for each case individually, ensuring the highest level of protection. Proper packaging and careful loading of equipment into the vehicle are crucial to its preservation during transportation. We ensure that your equipment is delivered to its destination in the same condition it left our production complex or warehouse.

VR-TECHNOLOGY

We use virtual reality technology for designing children's play complexes and furniture. This allows us to examine every detail of our project before physical implementation. It enables us to better understand how users will interact with the product and assess how well it will fit into its environment.

LEBER HOT ZINC PROTECT (ENHANCED CORROSION PROTECTION)

Leber Hot Zinc Protect offers decades of corrosion protection through the process of hot-dip galvanizing. Metal products are immersed in molten zinc at approximately 450°C, forming a durable, rust-resistant coating. The thick zinc layer can protect the metal for decades, with a typical lifespan of up to 50 years or more under normal conditions.

PACKAGING DEPARTMENT

To ensure long-term storage and transportation, we securely package all our equipment. Each product is wrapped in protective materials and then placed in a sturdy box or other container that prevents direct contact with the external environment. The packaging provides reliable protection against shock, moisture, dust, and other external influences.

MATERIALS

PINE

ASPEN

ACACIA

ROUND WOOD

LARCH

**GLUED TIMBER
ROUNDED**

**GLUED LAMINATED
TIMBER**

MATERIALS

ROPES

We combine ropes from different materials — nylon, polyester, polypropylene and steel. Inside we use aluminum stainless steel sleeves. Such ropes provide high strength and resistance to breakage, while remaining soft and elastic.

SLIDES

We buy the tall slides in Russia. They are manufactured using the rotomolding method, which ensures high density and quality. These are durable and safe structures, ideal for children's playgrounds.

HPL WITH UV PROTECTION

It is not plastic, but a natural material based on thermoactive resins and paper. It is extremely resistant to external influences - impact, moisture, extreme temperatures. HPL-plastic differs from its analogs by high hardness, durability, non-toxicity. HPL reliably protects from ultraviolet rays, which prevents fading and destruction of the material under the influence of the sun.

HDPE (HIGH-DENSITY POLYETHYLENE)

High Density Polyethylene (HDPE) is characterized by its strength and resistance to mechanical damage, making it suitable for a variety of structural applications.

STAINLESS STEEL

Wear-resistant material, resistant to corrosion. Shot blasted. After protection with Leber Zinc Protection, the steel surface is perfectly coated with paint. Thanks to this, the elements retain their aesthetic appearance in case of sudden temperature changes. Stainless steel is characterized by high strength and durability, it is resistant to mechanical damage and aggressive environmental influences. This material is easy to clean and does not require complicated maintenance, making it ideal for heavy-duty applications

CARBON STEEL

The basis for the structural elements of playgrounds. The strength and rigidity of carbon steel ensures the reliability of the play equipment. It is guaranteed to withstand significant loads and frequent use. Carbon steel is not subject to deformation, which gives stability and safety to the structures.

STAINLESS STEEL FASTENERS

Creates strong and durable joints between different components and structures of equipment on playgrounds and sports grounds. Provides stability of playgrounds. It does not have sharp edges, which prevents children's traumatism.

"MOSKVICH" PLAYHUBS

“MOSKVICH” PLAYHUBS

Moskvich playhubs are unique, custom-designed play areas created specifically for each location. These are complete recreational spaces with their own themes and sets of activities, providing an enjoyable and comfortable experience for both children and adults.

Moskvich playhubs, with their diverse design, are tailored to children of different ages and recreate imaginative worlds — from dinosaurs and Native American life to wildlife and a giant piano. Children can spend hours exploring these creative environments. Each play system is designed to develop cognitive, social-emotional, creative, and physical skills.

4 SIMPLE STEPS TO CREATE A PLAY SPACE WITH MOSKVICH PLAYHUB:

1. IDEA AND CONCEPT

We start by understanding the client’s vision and needs. Our team of designers and architects works closely with the client to create a unique concept for the play space. Drawing inspiration from the project’s features and surroundings, we offer creative and innovative solutions that will bring joy to children and seamlessly blend into the environment.

3. PRODUCTION AND TEST ASSEMBLY

Once the project is ready, we proceed to production. Using modern equipment, we create high-quality and durable play elements. Each element undergoes test assembly to ensure its reliability and safety. Then, the products are sent for final adjustments and painting.

2. DESIGN AND DEVELOPMENT

Once the concept is approved, we move on to detailed design. We create the technical documentation, taking into account all aspects of safety and functionality. We develop prototypes and models that clearly demonstrate the future playhub and allow for necessary adjustments.

4. INSTALLATION AND COMMISSIONING

The final stage is the installation of the playhub. We conduct on-site inspections and testing to ensure the space meets all required standards and that the original vision is fully realized. Once complete, the Moskvich playhub is 100% ready for use.

Age range: 3-7 years

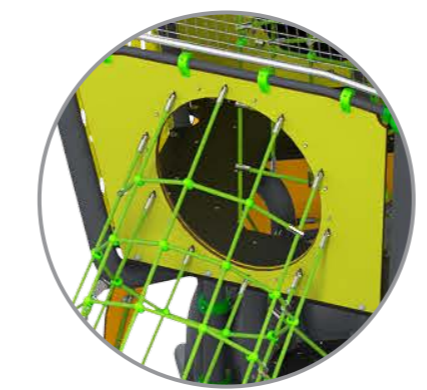

TOWERS

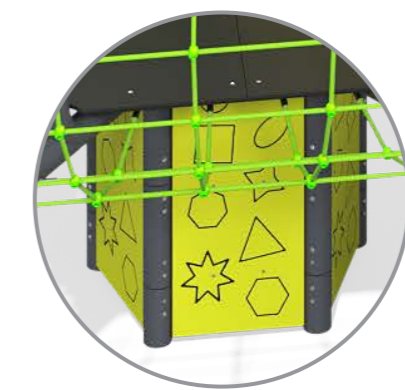

“Towers” are suitable for play in any weather. Canopies provide protection from the sun and precipitation, while a stainless steel wire mesh ensures safety throughout the complex. Children can explore the structure or relax in a hammock. There is a separate play module for children under 6 years old.

PLAY VALUE

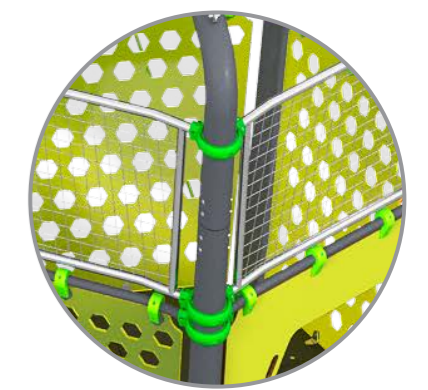

Play value combines the attractiveness and significance of the play experience for children. It arises from a mix of several factors: engaging play mechanics, the level of involvement, and the sense of satisfaction. Play value motivates the child to continue playing, improving cognitive skills, and exploring observed effects. Thus, the play item becomes an important educational tool.

Physical activity associated with exploring the structure and using various play elements promotes the development of gross and fine motor skills, coordination, and overall physical endurance.

The complex features additional activities and puzzles that support the development of problem-solving skills and logical reasoning in children.

The protection and comfort provided by the canopies and mesh reduce anxiety and enhance the sense of security, especially important for younger children.

At Leber, we recognize that every playground is unique. That's why our slides are designed for ultimate flexibility — allowing you to choose the perfect configuration, material, and placement to match your space and vision.

Material Options:
 Stainless Steel: Durable and sleek, ideal for modern designs. HPL and HDPE Plastic: Materials with exceptional weather resistance and long-lasting aesthetics.

Age range: 3-12 years

Our in-ground trampolines seamlessly blend into any landscape, adding an exciting element of motion and energy without disrupting the visual harmony of the space. Choose from a variety of shapes and sizes — with the option to add built-in LED lighting that makes the jumping experience even more magical after dark.

Safe, easy to install, and loved by children of all ages, these trampolines create a playful atmosphere and bring movement to playgrounds and parks.

Age range: 12+

Designed to support healthy movement and daily activity, our outdoor fitness stations offer a versatile workout experience in the fresh air. From basic strength exercises to full-body training, they're suitable for all ages and ability levels.

All equipment is available in a wide range of colors to match your project's aesthetic. We can manufacture our fitness units — like any other product in our catalog — in the color of your choice. Just reach out to your manager for the full palette.

FENCING OF THE SPORTS GROUND MULTI USE GAME AREA

Multi use game areas (MUGA) are designed for hosting various games such as football, basketball, volleyball, tennis, badminton, and others. The size of the ready-made MUGA depends only on your needs, we will make it individually for you.
